Redefining Fit for Fashion

Micro, Small & Medium Enterprises

Group A3 | MBA – Entrepreneurship | April 16, 2025

From Concept to Clarity: Our B2B Pivot

1

Original Idea

All-in-one AI sizing + virtual try-on platform for fashion e-commerce.

2

Feedback Revealed

- B2C users are **price-sensitive** and prefer **free** tools.
- B2B clients (MSMEs) are **willing to pay** for tech that reduces returns.

3

Our Pivot

B2B-first SaaS platform for MSMEs → B2C multi-retailer layer in future (18–24 months).

Would you rather pay a fee for a sizing & recommendation tool that works across multiple stores, or prefer to have it free on so...

Survey results from 29 shopper respondent in India, Philippines and Sri Lanka

How much would you be willing to pay for an AI-powered sizing and virtual try-on solution?

Survey results from 15 MSME respondent in India, Philippines and Sri Lanka

Business Scope

Markets: India, Sri Lanka, and the Philippines.

Target Users:

- B2B: Resellers, boutique owners, and tailoring professionals.
- B2C: Online shoppers aged 18–45 years.

Technology Features:

- AI-based size recommendations.
- 3D body scanning for accurate measurements.
- Virtual try-on to see clothes on a virtual body.

API support for Shopify and Shopee.

Goal: Reduce returns, and increase checkout rates for Micro, Small & Medium Enterprises

Survey results from 15 respondent MSMEs in India, Philippines and Sri Lanka

Limitations & Considerations

- Currently does not support intimate wear, swimwear, children's wear or accessories.
- Accuracy depends on merchant-supplied size charts and data.
- B2C to follow after a 12-month B2B performance review.
- Some MSMEs face tech challenges; onboarding support is provided.
- Initial launch in India, followed by Sri Lanka and the Philippines.

Productization : Size $\neq$ Fit

Survey results from 29 respondent shoppers in India, Philippines and Sri Lanka

If two items had identical size labels, but one "felt better," would you still consider the sizing accurate?

Is it harder to find the right size for:

Do you prefer clothes that fit:

Would you rather pay a fee for a sizing & recommendation tool that works across multiple stores, or prefer to have it free on some stores' websites/apps

Size Vs. Fit

Size = General measurements

- S, M, L, etc.
- May vary by brand, style, and fabric

Fit = Shape (loose, tight or flare) and cut of the clothing.

- How the clothes sit on the body

To suggest the right fit:

- Understand their body types
- Comfort level
- Style preference

Shape Guide: Fit & Style Preferences

Female

Body shape	Style suggestions	Why it works
Pear-Shaped	Classic Fit Boyfriend Fit	Looser hip area. Classic fit tops for balance. Avoids tight squeeze in hips.
Apple-Shaped	Classic Fit Boyfriend Fit	Looser fit on top helps flatter midsection. Slim fit may emphasize upper body width.
Athletic	Slim Fit Skinny Fit	Slim cuts highlight definition. Boyfriend fit adds shape contrast.
Curvy / Full-Figured	Classic Fit Boyfriend Fit	Offers room and comfort without squeezing curves. Slim may not sit right on bust or hips.
Hourglass	Classic Fit	Balances bust and hip proportions, avoids tight pull. Boyfriend fit can work if waist is defined.

Male

Body shape	Style suggestions	Why it works
Athletic	Slim Fit Classic Fit	Slim shows muscles; classic gives comfort
Rectangle	Classic Fit Slim Fit	Creates shape through structure; slim adds definition
Triangle	Classic Fit Relaxed Fit	Looser fit balances wider hips and waist
Inverted Triangle	Slim Fit Athletic Fit	Slim highlights broad shoulders and narrow waist
Oval	Classic Fit Relaxed Fit	Provides more room around the midsection; avoids tightness at the belly. Structured tops help add balance and shape.

Making it Fit

Survey results from 29 respondent shoppers in India, Philippines and Sri Lanka

How likely are you to shop more confidently from a brand offering this kind of sizing + virtual try-on experience?

Would you trust try-ons more if they showed:

Would a "fit confidence score" (e.g. 85%) help your decision?

Would you prefer to scan your body or enter a past item you love?

Customer Segmentation

Target Market

- Micro, Small and Medium clothing businesses
- Located in India, Sri Lanka, and the Philippines
- Suffers from high return & low checkout rates

Key Segments

- Retailers: (Brick-and-mortar stores, E-commerce platforms, Boutiques & Department stores)
- Designers & Product Developers: (Fashion designers, In-house design teams & Independent fashion studios)
- D2C (Direct-to-Consumer)
- Private Labels

Key Demographic:

- Small business owners aged 25–45 with basic to moderate education.

Initial Roadmap

What We're Still Testing

Key Assumptions

- MSMEs will adopt if ROI is provable
 - We believe reducing returns by even 10–15% will justify the cost for them.
- Fit-matching logic improves conversion more than sizing alone
 - Recommending fit types based on body shape + past purchases will drive confidence.
- Proof-of Concept or trial access is crucial for onboarding MSMEs
 - Budget-conscious clients need proof before committing to a monthly fee.

Next Steps

- Pilot Test with 2–3 MSMEs
 - Use early adopter stores to track return rates, conversions, session length
- Run Controlled Shopper Trials
 - Match shoppers with their body scan + fit preference
 - Compare recommendation accuracy vs. personal satisfaction
- Fit Type Logic Refinement
 - Map real buyer behavior to recommended fits
 - Update based on feedback from body shapes + purchase history

Appendix A – Style vs. Fit

Size

- Numeric or letter-based (e.g., M, 28, L)
- Based on standard measurements: bust, waist, hips, inseam
- Varies by brand, fabric, and style
- Good for general idea — not enough for a perfect fit

Fit

- Refers to cut, shape, and drape of the garment on the body
- More subjective: how the item feels and moves
- Types include slim, classic, relaxed, etc.

Key Insight:

A shopper can wear the correct size and still return the product if the fit feels wrong.

Examples: Same Size, Different Fit

Men's Shirt (Medium):

- Slim Fit = snug at chest/waist — for athletic build
- Classic Fit = more room — for general comfort

Women's Jeans Size 28:

- Skinny = tight silhouette
- Boyfriend = looser, relaxed style

Our Product Logic:

- Capture size using body scan
- Predict fit preferences based on:
 - Body shape
 - Style comfort
 - Past purchases

Appendix B – Cash Flows

Month	CAPEX (CAD)	OPEX (CAD)	Revenue (CAD)	Cash Flow (CAD)
